KI Mohammad Ifwan

COMPITATIVE CODER, PASSIONATE ABOUT AI, CLOUD AND OPEN
SOURCE

PROFESSIONAL SUMMARY

Highly analytical competitive programmer with a proven aptitude for algorithmic problem-solving and data structures, eager to leverage expertise in Artificial Intelligence, Cloud technologies, and Open Source development to build innovative, scalable solutions.

PROFESSIONAL EXPERIENCE

Co-founder

Apr 2022 – Present

BH Groups

- Pioneered the establishment of BH Digital Mart and BH Tours & Travels, cultivating a customer base exceeding 10,000 across digital commerce and travel services. Spearheaded comprehensive operations, marketing, and strategic planning initiatives, driving significant expansion for both business units.

Project Tech Lead

May 2025 – Present

KRYTIL

- Led the KRYTIL project, architecting and delivering robust technical solutions that enhanced system performance by 15% and ensured on-time project completion. Managed and mentored a team of 15 engineers, driving innovation and streamlining development workflows to achieve key project milestones.

Founding Lead

Mar 2024 – Present

AAG – Algorithm Alliance Group

- Spearheaded a 10+ member team, enhancing technical proficiency by coordinating multiple technical talks and hands-on workshops, while personally mastering over 150 Data Structures & Algorithms problems in C.

PROJECTS

DocTalk

- Developed a web-based platform that allows users to book doctor appointments by selecting a preferred date and time. Integrated a chatbot for general medical guidance and appointment assistance. Implemented an online consultation feature with video call support, enabling patients to connect with doctors remotely. Technologies: ReactJS, ExpressJS, MongoDB (October 2024)

Eco-Kart

- Advanced to the 4th round in the GNUI National-Level 48-hour Hackathon in Hyderabad, ranking among the top 35 teams out of 1,000 + nationwide. Developed an e-commerce platform where every plastic item has a unique QR code linked to the user's data. Implemented a time-bound disposal system, where users must scan the QR code at designated locations before disposal. Failure to dispose within the time limit results in an automatic fine deduction from the user's bank account. Designed to promote responsible plastic waste management through technology. Technologies: ReactJS, ExpressJS, MongoDB (May 2024)
